*Your Rental Management will always be
Smooth Sailing with Armada Dynamics*

Armada Dynamics is the developer of the award winning EQM (Equipment Mangement) Software for the rental industry. We have over 20 years of designing, implementing and supporting rental enterprises. The EQM software is designed from its inception to be an integrated system that helps reduce costs, manage your resources and increase productivity. Our holistic approach provides rental companies with a powerful and unique tool in managing their rental business. Whether it is a heavy construction, audio visual, staging or an oil services company our software (EQM) can be tailored to your specific way of working.

EQM RENTAL SOFTWARE DESIGNED FOR THE WORLD YOU LIVE IN!

What We Do

Armada Dynamics' EQM (Equipment Management Software) is the premier solution for companies who rent, sell or service equipment such as, construction, oil drilling, medical devices, forms, scaffolding, or any type of consumables.

Combined with the robust capabilities of Microsoft's ERP software, Microsoft Dynamics NAV, this integrated solution covers your rental processes and gives a deep insight into the costs, revenues and utilization of all your assets. This visibility is an essential tool for you to make informed business decisions.

The EQM software covers a great number of functions that solve real world day-to-day pains and challenges in operating a rental enterprise.

Based On Microsoft Dynamics NAV

The most powerful feature of the Armada EQM Rental Management Software is the complete integration with Microsoft Dynamics NAV.

With over 100,000 installations, Microsoft Dynamics is the most popular ERP software package in the world. Microsoft Dynamics NAV offers a comprehensive accounting, reporting, inventory control, manufacturing, distribution and its own built in CRM (for Sales, Marketing, and Service Management).

Reasons for its popularity include: Dashboard design, 3 tier architecture including web services, SQL database, advanced processing and coding means no database corruption. With tight integration with Microsoft's other software such as Office, it includes CRM functions that utilize Outlook's Business Contact Manager, and works with Microsoft CRM.
